

FleetSharp Tool Trackers

Stop Losing Tools. Start Arriving Prepared.

Managing lighter equipment and tools can be challenging, but FleetSharp's Tool Trackers help simplify the process. With FleetSharp, you can monitor all your important tools, vehicles, and other assets all in our user-friendly platform. FleetSharp's Tool Trackers help prevent loss, reduce unexpected costs, and enhance customer satisfaction by efficiently tracking your job-critical tools.

How do FleetSharp's Tool Trackers work?

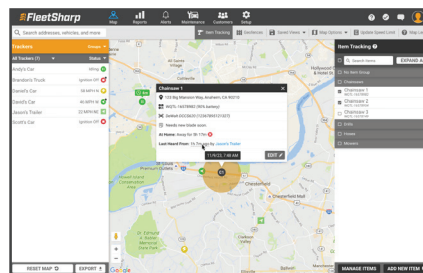

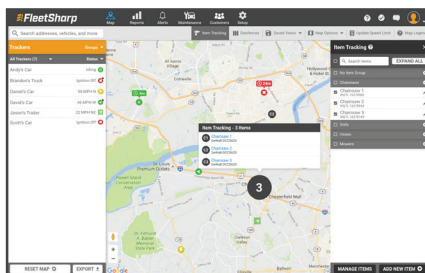

These small, lightweight, Bluetooth tags attach easily to critical tools and equipment, connecting to our vehicle trackers. They display the 'last seen' location on a live map, whether in a vehicle or at a job site. Regular vehicle tracker scans identify if your tools are present or out-of-range, providing details about when and where they were last in-range of your vehicle. Quickly retrieve forgotten tools by configuring an alert to be notified when a tool is left behind at a job site.

Maximize efficiency and security.

Integrating FleetSharp Tool Trackers into your Fleet Management solution helps you locate your important tools and allows you to set timely maintenance reminders, which together boost productivity, minimize losses, and ensure your team is prepared for customer visits.

Examples:
Drills, saws, heavy equipment attachments, weed eaters, blowers, trimmers, chainsaws, dehumidifiers, air movers, moisture meters, and more.

Key Benefits:

-  **Track critical tools and equipment:** Always know the last location of your tools.
-  **Reduce costs:** Minimizes losses from misplaced, missing, or stolen tools.
-  **Simplify maintenance:** Set time-based service reminders.
-  **Improve customer satisfaction:** Ensure your team is prepared for customer visits.
